

Decision for the Safety Assessment of
Monsanto's Canola RT 73
For Renewal for Direct use as Food and Feed, or for Processing

Monsanto Philippines, Inc. submitted an application to renew Canola RT 73 for Direct Use as Food and Feed, or for Processing to the Bureau of Plant Industry on August 21, 2008. Monsanto Phils., Inc. has provided latest scientific studies in support of the safety claims to renew the biosafety permit for direct use as food and feed or for processing. A dossier of relevant scientific studies on the regulated article of Canola RT 73 and other related information was required to be submitted. The Scientific Technical Review Panel (STRP) reviewed all the document submissions to determine the safety of the regulated article on human and animal health.

The petitioner/applicant published the petition notice of the application on two nationally circulated newspapers- Manila Standard and Manila Times both on September 5, 2008. The publication was made to solicit public comments. The Bureau of Plant Industry received no comment on the petition during the 15-day comment period.

After reviewing the scientific data and information relevant to the application of Monsanto Phils. Inc., the Scientific Technical Review Panel concluded that Canola RT 73 and all progenies derived from crosses of the product with any conventionally-bred canola, and canola containing approved-biotech events for direct use as food and feed or for processing is as safe and substantially equivalent to its unmodified counterpart, and was therefore recommended for approval for the renewal of its Biosafety permit for direct use as food and feed or for processing. The BPI Biotechnology Core Team in consultation with the Department of Agriculture-Biotechnology Advisory Team reviewed the results of the assessment of the STRP. The results of the final review concluded the safety of Canola RT 73 for direct use as food and feed, or for processing.

A biosafety permit renewal for Canola RT 73 and all progenies derived from crosses of the product with any conventionally-bred canola and canola containing approved-biotech events for direct use as food, feed or for processing was issued to Monsanto Phils., Inc. on October 22, 2008. The biosafety permit provides that "Canola RT73 is as safe for human food, animal feed and for processing as its conventional counterparts". The approval, however does not include cultivation of Canola RT73 in the Philippines. Canola RT73 will be included in the Approval Registry being prepared by the Department of Agriculture.

Monsanto Phils. Inc. informed the public of this approval by way of publishing in Manila Bulletin on December 31, 2008 that imports of this product is covered by conditions for approval as provided in Department of Agriculture Memorandum Circular No. 8, Series of 2003.
